

TS5A22362 0.65-Ω 2-channel SPDT Analog Switches With Negative Signaling Capability

1 Features

- Specified Break-Before-Make Switching
- Negative Signaling Capability: Maximum Swing from -2.75 V to 2.75 V ($V_{CC} = 2.75\text{ V}$)
- Low ON-State Resistance ($0.65\text{ }\Omega$ Typical)
- Low Charge Injection
- Excellent ON-State Resistance Matching
- 2.3-V to 5.5-V Power Supply (V_{CC})
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
 - 2500-V Human-Body Model (A114-B, Class II)
 - 1500-V Charged-Device Model (C101)
 - 200-V Machine Model (A115-A)

2 Applications

- Cell Phones
- PDA's
- Portable Instrumentation
- Audio Routing
- Medical Imaging

3 Description

The TS5A22362 is a bidirectional, 2-channel single-pole double-throw (SPDT) analog switch designed to operate from 2.3 V to 5.5 V. The device features negative signal swing capability that allows signals below ground to pass through the switch without distortion. The break-before-make feature prevents signal distortion during the transferring of a signal from one path to another. Low ON-state resistance, excellent channel-to-channel ON-state resistance matching, and minimal total harmonic distortion (THD) performance are ideal for audio applications. The 3.00 mm × 3.00 mm DRC package is also available as a nonmagnetic package for medical imaging application.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS5A22362	VSON (10)	3.00 mm × 3.00 mm
	DSBGA (10)	1.86 mm × 1.36 mm
	VSSOP (10)	3.00 mm × 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (August 2015) to Revision B	Page
• Changed C _L TEST CONDITION value for all THD PARAMETERS from 15 pf to 35 pf.	6
Changes from Original (June 2015) to Revision A	Page
• Changed the Functional Block Diagram.	15

5 Pin Configuration and Functions

*The exposed center pad, if used, must be connected as a secondary GND or left electrically open.

Pin Functions

NAME	PIN			TYPE	DESCRIPTION
	VSON	VSSOP	DSBGA		
VCC	1	1	A2	—	Power Supply
NO1	2	2	A3	I/O	Normally Open (NO) signal path, Switch 1
COM1	3	3	B3	I/O	Common signal path, Switch 1
NC1	4	4	C3	I/O	Normally Closed (NC) signal path, Switch 1
IN1	5	5	D3	I	Digital control pin , Switch 1
GND	6	6	D2	—	Ground
IN2	7	7	D1	I	Digital control pin, Switch 2
NC2	8	8	C1	I/O	Normally Closed (NC) signal path, Switch 2
COM2	9	9	B1	I/O	Common signal path, Switch 2
NO2	10	10	A1	I/O	Normally Open (NO) signal Path, Switch 2

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

			MIN	MAX	UNIT
V _{CC} ⁽²⁾		Supply voltage ⁽³⁾	−0.5	6	V
V _{NC} V _{NO} V _{COM}		Analog voltage ⁽³⁾ ⁽⁴⁾ ⁽⁵⁾	V _{CC} − 6	V _{CC} + 0.5	V
I _{I/OK}	Analog port diode current	V _{NC} , V _{NO} , V _{COM} < 0 or V _{NC} , V _{NO} , V _{COM} > V _{CC}	−50	50	mA
I _{NC} I _{NO} I _{COM}	ON-state switch current	V _{NC} , V _{NO} , V _{COM} = 0 to V _{CC}	−150	150	mA
	ON-state peak switch current ⁽⁶⁾		−300	300	
I _{NC} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾ I _{NO} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾ I _{COM} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾	ON-state switch current	V _{NC} , V _{NO} , V _{COM} = 0 to V _{CC}	−350	350	mA
	ON-state peak switch current ⁽⁶⁾		−500	500	
V _I		Digital input voltage	−0.5	6.5	V
I _{IK}	Digital input clamp current ⁽³⁾ ⁽⁴⁾	V _I < 0	−50	50	mA
I _{CC} I _{GND}		Continuous current through V _{CC} or GND	−100	100	mA
T _{stg}		Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (5) This value is limited to 5.5 V maximum.
- (6) Pulse at 1-ms duration < 10% duty cycle.
- (7) $V_{CC} = 3.0$ V to 5.0 V, $T_A = -40^{\circ}\text{C}$ to 85°C .
- (8) For YZP package only.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	2.3	5.5	V
V_{NC} V_{NO} V_{COM}	Signal path voltage	$V_{CC} - 5.5$	V_{CC}	V
V_{IN}	Digital control	GND	V_{CC}	V

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TS5A22362			UNIT
		DGS (VSSOP)	DRC (VSON)	YZP (DSBGA)

8 Detailed Description

8.1 Overview

The TS5A22362 is a bidirectional, 2-channel single-pole double-throw (SPDT) analog switches designed to operate from 2.3 V to 5.5 V. The devices feature negative signal capability that allows signals below ground to pass through the switch without distortion. The break-before-make feature prevents signal distortion during the transferring of a signal from one path to another. Low ON-state resistance, excellent channel-to-channel ON-state resistance matching, and minimal total harmonic distortion (THD) performance are ideal for audio applications.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Negative Signaling Capacity

The TS5A22362 dual SPDT switches feature negative signal capability that allows signals below ground to pass through without distortion. These analog switches operate from a single +2.3-V to +5.5-V supply. The input and output signal swing of the device is dependant of the supply voltage V_{CC} : the devices pass signals as high as V_{CC} and as low as $V_{CC} - 5.5$ V, including signals below ground with minimal distortion.

Table 1 shows the input/output signal swing the user can get with different supply voltages.

Table 1. Input/Output signal swing

SUPPLY VOLTAGE, V_{CC}	MINIMUM (V_{NC} , V_{NO} , V_{COM}) = $V_{CC} - 5.5$	MAXIMUM (V_{NC} , V_{NO} , V_{COM}) = V_{CC}
5.5 V	0 V	5.5 V
4.5 V	–1.9 V	4.5 V
3.6 V	–2.5 V	3.6 V
3.0 V	–2.5 V	3.0 V
2.7 V	–2.8 V	2.7 V
2.3 V	–3.2 V	2.3 V

8.4 Device Functional Modes

The function table for TS5A22362 is shown in Table 2

Table 2. Function Table

IN	NC TO COM, COM TO NC	NO TO COM, COM TO NO
L	ON	OFF
H	OFF	ON

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Ensure that the device is powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO.

Tie the digitally controlled inputs select pins IN1 and IN2 to VCC or GND to avoid unwanted switch states that could result if the logic control pins are left floating.

All unused digital inputs of the device must be held at VCC or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

9.2 Typical Application

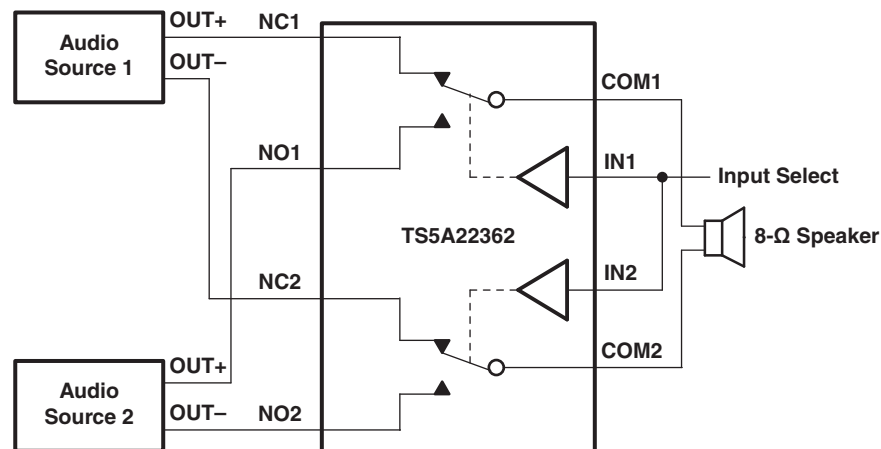

Figure 24. Typical Application

9.2.1 Design Requirements

Tie the digitally controlled inputs select pins IN1 and IN2 to VCC or GND to avoid unwanted switch states that could result if the logic control pins are left floating.

9.2.2 Detailed Design Procedure

Select the appropriate supply voltage to cover the entire voltage swing of the signal passing through the switch because the TS5A22362 operates from a single +2.3-V to +5.5-V supply and the input/output signal swing of the device is dependant of the supply voltage VCC. The device will pass signals as high as VCC and as low as VCC – 5.5 V. Use table 2 as a guide for selecting supply voltage based on the signal passing through the switch.

Ensure that the device is powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO.

Typical Application (continued)

9.2.3 Application Curve

Figure 25. R_{on} vs V_{COM}

10 Power Supply Recommendations

The TS5A22362 operates from a single 2.3-V to 5.5-V supply. The device must be powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO. It is recommended to include a 100- μ s delay after VCC is at voltage before applying a signal on NC and NO paths

It is also good practice to place a 0.1- μ F bypass capacitor on the supply pin VCC to GND to smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

TI recommends placing a bypass capacitor as close to the supply pin VCC as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

Minimize trace lengths and vias on the signal paths in order to preserve signal integrity.

11.2 Layout Example

Figure 26. Layout example of TS5A22362

12 Device and Documentation Support

12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.2 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
